Chris,

On Saturday September 14, 2024 at approximately 11:00 am, an operator noticed accumulated stormwater in a tailings pit overtopping a berm with some water going into the adjacent wetland. Operator immediately stopped the flow.

There was a miscommunication between the operator and the shift supervisor, and notification to the Area Manager and Environmental was not communicated until the following day (September 15, 2024 afternoon).

We are continuing to finalize the volume: however, It is estimated that approximately 1200 gallons of water was released.

Water within the tailings pit was sampled on Sunday at approximately 6:00 pm , as well as entry into the wetland and downstream from the release.

The background and Stations 1 and 2 are part of the TRS Daily Water Quality Monitoring program.

Stormwater in Pit	58.9
Entry point to wetland	42.0
Downstream Sample	11.0
Station 1 – Daily sampling	6.4
Background sample	4.6

State Watch Incident #	2024-7995
Pollution Notice	25811

We will provide an updated 5 day report by Friday, September 20, 2024.
Should you have any questions, please let us know.
